

In July 2010, **Diamix** joined **Pedersen**, a French manufacturer of tungsten carbide parts and hard-metal tools. Thanks to this synergy in hard materials (carbide and diamond) we can offer the composite industries a wider range of standard or customized tools: diamond electroplated tools, polycrystalline diamond (PCD) tools, resin- or metal-bonded wheels, carbide tools .

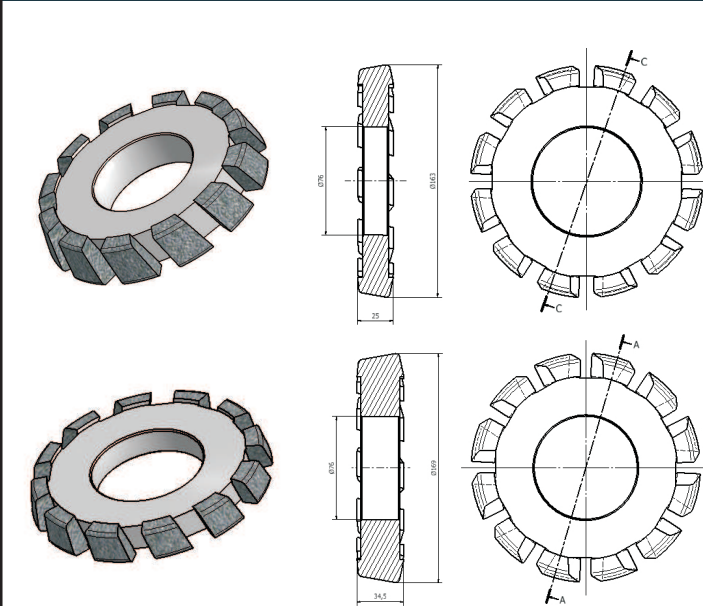

Our main strong points: a full range of tools for glass fibre reinforced plastics (GRP), including new and stripped & replated tools (grinding drums, calibration wheels, stop wheels, groove and chamfering wheels, low noise saw blades, drill bits, mill hole saws and core bits, etc..). We hold in stock the most popular tools for fast delivery.
